Bachelor programmes

International Business and Communication

Bachelor degree; 3,5 year

Price: 2360 Eur / sem

Double degree options:

Linnaeus (Sweden), INSEEC (France),
BI Norwegian Business School (Norway)

International Business and Communication integrated programme provides knowledge and practical skills necessary for a successful career in multinational corporations. The programme has been designed by taking account of global business trends such as globalization, multicultural character of business teams, importance of communication within and outside the company.

Students will have a strong understanding of international business functions and will have acquired personal and business communication skills as well as managerial competences required in a global company.

Industrial Technology Management

Bachelor degree; 4 years

Price: 2065 Eur / sem

Double degree options

Illinois Institute of Technology (USA)

Industrial Technology Management is a unique 4-year programme conducted at the Illinois Institute of Technology (IIT, USA) and ISM University of Management and Economics (ISM, Lithuania).

This is a unique programme in this region and combines the disciplines of management, technology management, fundamental science, and humanities/social science into a coherent whole.

By selecting one of five specialisations, you will gain deeper insight into supply chain management, telecommunication technology, industrial sustainability, manufacturing technology, and industrial facilities.

Economics and Politics

Bachelor degree; 4 years

Price: 2065 Eur / sem

Double degree options

BI Norwegian Business School (Norway)

Economics and Politics programme looks into the logic and outcomes of decision-making by economic and political actors. Being very closely interrelated, these two areas often influence each other; therefore, to forecast the impact of a political decision on economics, one has to understand both areas very well. Economics and Politics Programme relies heavily on game theory and qualitative data analysis methods, which enable consistent and efficient examination of economic and political crossing points. The ability to use these tools gives an advantage to those who pursue further studies in the best universities of the world or who choose to work in a non-academic sector.

Finance

Bachelor degree; 3,5 years

Price: 2360 Eur / sem

Double degree options

BI Norwegian Business School (Norway)

Finance programme is in line with the requirements for CFA® (Chartered Financial Analyst) Level 1 examinations. CFA® is the globally recognised top level qualification of financial analysts that is certified by the CFA Institute. This study programme is meant to educate versatile financial specialists. The students studying according to the programme acquire knowledge about the management of state, institutional (financial), corporate and personal finance, which they can later deepen in a specific area of their choice. After the studies you will be able to: forecast the influence of current economic and financial decisions in a broader context of organisational management; choose the suitable mathematical, statistical, econometric and other analysis methods as well as to independently perform the economic analysis of a country, sector or company; analyse corporate financial management processes and solve financial and management accounting tasks of various difficulty and the operations of financial markets and institutions.
